

Montana Timber Holdings Pty Ltd FSC controlled wood – Call for stakeholder comments.

Background

Montana is a saw milling company utilise durable timbers extracted from *foothill and coastal mixed species forest in East Gippsland*. *The harvesting technique uses non-conventional “thinning”, single tree and gap selection techniques that contribute to improved structural diversity compared with current systems where appropriate. This method will maintain a multi-aged treated forest area with a range of tree sizes/ages or growth stages so that forest remains largely stocked with a mix of retained trees and regeneration in gaps.*

Dogs Back Plot 2 WP395 pre-harvest structure BA 24 regrowth 8 mature

Dogs Back Plot 2 WP395 post-harvest structure BA 16 regrowth 4 mature

Call for stakeholder comment and involvement

Montana Mills are already certified for FSC Chain of Custody a will be seeking certification to FSC STD 40 005 controlled wood for chain of custody holders. We no seek comment from interested and affected stakeholders.
